

PUBLIC STATEMENT

Santiago, July 4, 2022 - ACERA's executive director publicly stated the guild's opposition to the newly introduced Executive bill regarding stabilization of electricity prices. The director says that companies associated with ACERA, including Enel, must consider the legal initiative unfeasible.

In this regard, we clarify that we do not share these statements and that the vision expressed by ACERA's executive director does not represent us.

We understand and share the bill's purpose to prevent an increase in energy prices affecting customers, especially vulnerable families. However, we believe the project needs polishing, allowing both companies to continue their energy transition investments while protecting users.
